Proprietary: Yes __X__ No _____

Award Statement

This proprietary software, Cymulate Extended Security Posture Management, gives the County the ability to assess its defensive controls against the latest threats. Extended Security Posture Management increases IT efficiency by automating activities such as threat intelligence testing, red teaming, and security drift prevention; by prioritizing security gaps so that there is no wasted time spent on secondary issues. Cymulate's Endpoint Security vector will allow the County to deploy and run simulations of full attack scenarios (e.g. ransomware or implementation of MITRE ATT&CK TTPs) on a dedicated endpoint in a controlled and safe manner, comprehensive testing that covers all aspects of endpoint security.

Article 10, S10-101 of the Purchasing Ordinance authorizes cooperative purchasing in the County. OMNIA Partners Public Sector meets or exceeds the County's Purchasing Ordinance requirements and has awarded Insight Public Sector contract #4400006644 for Cymulate software. The Director of Purchasing and the Director of Information Technology agree to award this contract to Insight Public Sector of Chandler, AZ.
